

SOUTDOOR 800

Dual Technology wireless outdoor Detector

INSTALLATION
V1.0

ENGLISH

1. INTRODUCTION

Soutdoor 800 is bidirectional wireless outdoor sensor.

It can be used with all types radio receivers of the series 800, and for low consumption 12uA, ensures a long battery life. It a full digital sensor (with digital PIR), with an analysis system devoid of the classical noise that occur with the use of traditional analog PIR. By using full digital PIR, the device is immune from white light masking and has much higher efficiency in the discrimination in its action range. Even with the significant temperature variations, the digital temperature compensation system, guarantees a high efficiency. It has a range of 15m, with an opening angle of 90 °.

Characteristics:

- *Dual technology outdoor sensors (2 digital PIR with 4 seconds AND operation).*
- *Different types of lenses depending on the type of installation (volumetric; vertical/horizontal).*
- *PET immune.*
- *Back tamper and anti-opening tamper.*
- *Range adjustable from 3 meters to 15 meters via wireless*
- *Walking test led (via wireless)*
- *Buzzer alarm (via wireless)*
- *Test function (via wireless)*
- *Double pulse (via wireless)*
- *Bracket*
