

# VT705P

## Transmisor de prueba.

### Test system

---

The remote test transmitter VT705P, connected to the detector via a plug, is used to test the functionality and mounting of the seismic detectors. The test system consists of a test generator inside the seismic detectors VV600/602-Plus and the crystal unit VT705P which is mounted on the protected object, inside the detector housing.

### Two test possibilities

---

There are two possibilities of testing; internal test of the detectors electronic or a function test of the detector and its physical contact to the protected object.

### Detalles

---

- Function test of the seismic detector
- Connected to detector via a plug

# VT705P

Transmisor de prueba.

## Technical specifications

---

### General

Accessory group	Sensores sísmicos
Type	Herramienta de prueba
