System Overview

The MotionEye product is an indoor motion-detected video camera, designed for applications where video verification of intrusion alarms is necessary or desired. It consists of a full HD pinhole HDCVI camera and a passive infrared sensor, allowing invisible video monitoring to provide video evidence for intrusion alarm. When the passive infrared sensor is triggered, it transmits alarm signal to DVR over coax (along with video signal).

Functions

Covert Surveillance

The camera integrated in MotionEye adopts cone-shaped pinhole lens which is hidden in the PIR case. Therefore, the video monitoring can hardly be realized.

Wide Detection Range

Designed with Fresnel lens, the PIR of MotionEye is able to cover wide monitoring range with horizontal angle of view up to 100° within a distance from 1m to 12m.

Accurate Alarm

The detection accuracy is well guaranteed with dual sensor technology, which determines intrusion based on both temperature and displacement. It automatically filters false positives such as a pet. Moreover, the sensitive of the alarm is adjustable.

Long Distance Transmission

HDCVI technology guarantees real-time transmission at long distance without any loss. It supports up to 800m transmission via coaxial cable, and up to 300m via UTP cable*.

*Actual results verified by real-scene testing in Dahua's test laboratory.

Tamper-proof Design

The device is designed with a built-in tamper switch to prevent itself from malicious separated. Once the case is damaged and the tamper switch is triggered, alarm info will be uploaded immediately.

Protection

With working temperature range of -10 °C to +50 °C (14 °F to +122 °F), the camera is designed for various temperature environments. Supporting ±25% input voltage tolerance, this camera suits even the most unstable power supply conditions. Its 4KV lightning rating provides protection against the camera and its structure from the effects of lightning.
